linkedin.com/in/suraj-doiphode-05835ab8

Senior Software Developer with 8+ years of experience (including internship) building Node.js backend systems for automotive and e-commerce platforms. Designs RESTful APIs, microservices, and Kafka-based event-driven architectures, with a track record of measurable performance gains: 30% lower API latency, 25% faster processing, 20% faster queries. Builds AI-enabled developer tooling with the OpenAI API and holds the AWS Certified AI Practitioner certification.

Core Competencies

- **Backend Engineering**: Node.js, JavaScript, TypeScript, Express.js, Restify.js, REST API design, microservices, Java.
- **Event-Driven & Distributed Systems**: Apache Kafka, event streaming, asynchronous communication between microservices.
- **Databases & Caching**: PostgreSQL, MySQL, MS SQL, Redis, Elasticsearch; query and schema optimization.
- **AI & Generative AI**: OpenAI API, prompt engineering, LLM-powered workflow automation, foundation models, responsible AI.
- **DevOps & Frontend**: GitLab CI/CD, Jenkins, Docker, AWS fundamentals, Git; Angular, RxJS.
- **Engineering Practice**: system design, performance optimization, code reviews, mentoring, Agile/Scrum.

Professional Experience

Volkswagen Group Technology Solutions India — **Bengaluru, India**
Senior Software Developer — *2023–Present*

- Designed and built an AI-driven workflow automation tool using OpenAI APIs that automatically creates GitLab Merge Requests on every push, with OpenAI-powered automated code review comments on each MR; used by 4 teams, automating 15–20 MRs a month and saving 5–10 minutes per MR.
- **MP Tact (client: Scania):** shop-floor application on the truck manufacturing line displaying the takt clock and chassis details; led backend and full-stack development in Node.js, Angular, and MS SQL; built the application from scratch, including backend architecture, database schema, API services, and GitLab CI/CD pipelines.
- **SVPS (Scania Vehicle Processing System):** migrated the legacy system to a Node.js microservices architecture, reducing maintenance effort and improving reliability; implemented Kafka-based event streaming and RESTful APIs integrating multiple Scania systems.
- Refactored SVPS legacy processing logic, reducing processing time by 25%; resolved critical production issues and automated major features, improving system stability.
- **DTS Docs:** designed a microservices architecture and optimized PostgreSQL queries, improving query performance by 20%; ran peer code reviews and mentored junior developers.
- Received four Innovation Awards, for legacy migration, AI tooling, and Kafka integration work.

FirstCry.com (BrainBees Solutions Pvt. Ltd.) — **Pune, India**
Software Developer — *2019–2023*

- Developed and maintained Node.js and Restify.js backend services for large-scale e-commerce operations serving lakhs (hundreds of thousands) of users at peak hours, including the homepage and product listing backends.
- Refactored backend services to reduce API response latency by 30%; integrated Redis caching and optimized MySQL/PostgreSQL schemas.
- Built an in-house search autosuggest on the existing Elasticsearch setup, with Redis caching.
- Automated deployment pipelines with Jenkins and standardized Git branching, code review, and deployment practices.

- **FirstCry.com (BrainBees Solutions Pvt. Ltd.)** **Pune, India**
  Software Developer Intern *2018–2019*
  - Supported Node.js backend service development and performed unit and load testing to improve application stability.

Education

- **Savitribai Phule Pune University** **Pune, India**
  Bachelor of Engineering in Information Technology *2017*

Certifications

- **AWS Certified AI Practitioner (AIF-C01)** – Amazon Web Services (2026). Verify credential

Languages

- Marathi (native), Hindi (fluent), English (professional working proficiency).

Honors and Awards

- **Innovation Award (four times)** – Volkswagen Group Technology Solutions India, for legacy migration, AI tooling, and Kafka integration.
